## Summary

---

MCA graduate specializing in Generative AI and Agentic AI, with hands-on experience building production-ready AI systems using LangGraph, RAG, Model Context Protocol (MCP), LLMs, FastAPI, and AWS. Experienced in designing multi-agent workflows, stateful AI applications, and intelligent retrieval pipelines with persistent checkpointing. Strong foundation in Java, Python and full-stack development, with a passion for building scalable, real-world AI applications.

## Education

| <b>Multi-Agent AI Job Matching Platform</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://github.com/akashp2002/careerpilot_ai">https://github.com/akashp2002/careerpilot_ai</a>           |
| <ul style="list-style-type: none"><li>Built a LangGraph multi-agent job-matching platform with MCP-based job retrieval, JD analysis, semantic matching, ranking, explanations, and human-in-the-loop refinement.</li><li>Developed a FastAPI and React resume intelligence pipeline using Groq gpt-oss-20b, Gemini fallback, LangSmith tracing, and PostgreSQL persistence.</li><li>Productionized the platform with JWT authentication, API rate limiting, prompt-injection guardrails, Upstash Redis caching, and SSE streaming.</li><li>Deployed the application on AWS EC2 with Nginx and Amazon RDS PostgreSQL; implemented GitHub Actions CI/CD for automated testing, health checks, and continuous deployment.</li></ul> |                                                                                                                   |
| <b>Cloudflare Incident RAG System</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://github.com/akashp2002/CloudflareAssistant">https://github.com/akashp2002/CloudflareAssistant</a> |
| <ul style="list-style-type: none"><li>Built a full-stack RAG system (FastAPI, React, LlamaIndex, Qdrant, Groq, Docker) to answer questions from Cloudflare incident postmortems.</li><li>Implemented hybrid retrieval combining dense vector search and BM25 via Reciprocal Rank Fusion, followed by cross-encoder reranking for improved relevance.</li><li>Built grounded answer generation with source citations and explicit refusal on insufficient context, and evaluated retrieval quality using Ragas.</li></ul>                                                                                                                                                                                                         |                                                                                                                   |

## Skills

---

Frontend: React.js, HTML, CSS  
Backend: Node.js, Express.js, FastAPI, REST APIs  
Programming Languages: Java, Python, SQL  
Database: MongoDB, MySQL, PostgreSQL, Qdrant (Vector DB)  
AI/GenAI: RAG, LlamaIndex, LangGraph, MCP, Groq API, Prompt Engineering, Transformers  
Cloud/Tools: AWS (EC2, RDS), Docker, Git, GitHub Actions (CI/CD), LangSmith, Ragas

## Certificates
